Software Engineer Intern & Full Time Opportunities Available

What we do

Our team of intellectually curious software developers and engineers are creating new experiences for customers to shop Walmart, daily deploying +100,000 lines of code, working on private, public and hybrid clouds, and so much more.

What you'll do

We need super smart engineers from all levels to help us build the best-engineered platforms in the world. Our engineers combine creativity, curiosity, and drive to continuously perfect and revolutionize from the inside out. We are looking to bring more intellectually curious engineers who are super passionate about technology.

The Environment

Our platform is largely an event driven platform implemented via a microservice architecture.   The platform runs in the cloud and uses a large number of technologies and middle ware. The bulk of backend code is written Java and NodeJS, but we're open and leverage other languages as well.

The Teams

We have a diverse set of engineering challenges and likewise, we have numerous teams to help solve them. Below are just a few of the Software Engineering areas of focus:

Backend Generalist

Our exceptional back-end developers dive deep into designing, developing and supporting large-scale, cloud-based distributed systems, have strong operational excellence, testing skills and a good understanding of event-driven systems.

Machine Learning Engineer

Engineers with a strong understanding of machine learning will handle data at the scale of billions of events and help tune our systems and processes based on the information that is extracted.

DevOps

Our DevOps engineers are critical for maintaining our large-scale distributed systems and resolving issues that arise. This is perfect for those who like having a high-level view and diving in to help with a variety of teams and systems.

Mobile Engineer

Our mobile engineers create features for the Walmart iOS/Android apps and deliver a first-in-class experience for our customers (our app is so highly rated that we're clearly doing something right!).

Systems Engineer

In order to support Walmart's rapid growth, we need networking, onboarding, and user support for a variety of devices and for users of diverse backgrounds.

Qualifications:

- Possess at least a 3.0 GPA or higher
- Pursuing a Computer Science or related degree
- External projects and/or work on GitHub is a strong plus
