

Technology Leadership Program

About us:

Target is one of the world's most recognized brands and one of America's leading retailers. What's the only constant in retail? Change. Our business is constantly evolving, using big ideas to solve complex problems and aspiring to create the most seamless shopping experience for our guest.

Target is looking for Software and Infrastructure Engineers to join our Technology Leadership Program. We are committed to innovation and as part of this rotational program you'll gain industry-leading experience while working at the cutting edge of retail tech. At Target, you'll have the opportunity to develop innovative solutions and leverage the latest technologies to make our platforms even better.

By joining our technology team, you'll contribute to creating the best possible shopping experience for our guests. You'll develop new and innovative tools for our teams to use and you'll collaborate with the brightest technical minds in building futuristic products, researching groundbreaking concepts, and influencing new ideas to transform retail. We'll support you with extensive training and robust development. This position includes competitive pay and discounts, and flexible scheduling. Transform your experience and reinvent digital retail with us!

About you:

- Currently enrolled in Computer Science/Computer Networking/Computer Engineering program (or related technical discipline)
- A problem solver who likes to build things, tackle complex technical challenges, and you also happen to have experience

Technology Leadership Program

with object-oriented design and coding skills ((C/C++ and/or Java, Python)

- Enjoy collaborating with a team and fancy yourself to be a strong communicator
- Thrive in a creative, experimental and moving target environment
- Have experience with Git or have exposure to mobile development
